

1. App Introduction

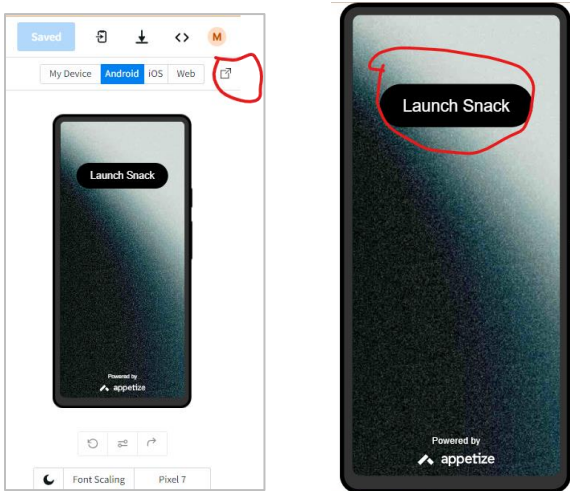

This App is about state management. The scenario is that the text field data can be shown again after reloading the App.

2. Test guidance

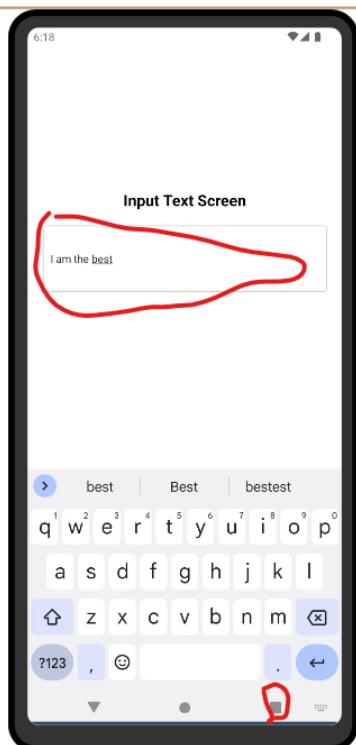

1) Method 1: open this link to navigate to the project, then you can launch the platform's android/iOS/web simulators to do the test

https://snack.expo.dev/@mariazhou6688/hw3_statemanage

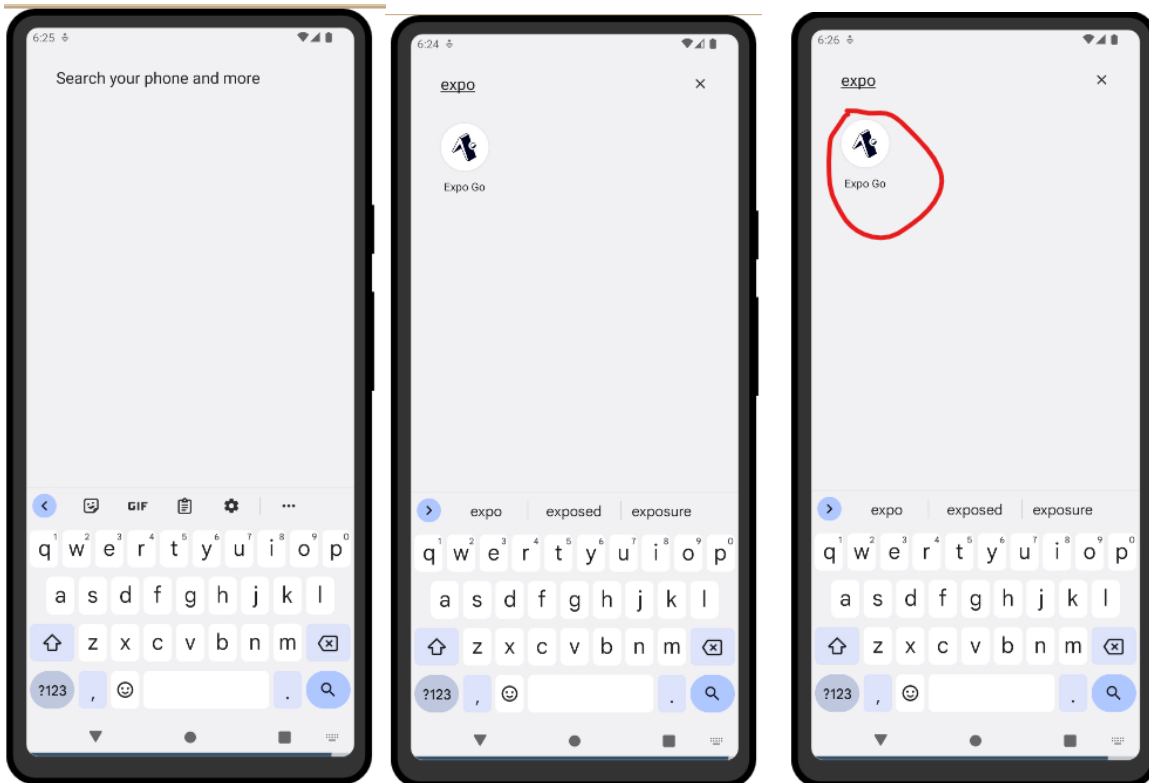

Step 1: Select a type simulator to launch a simulator to do the test, take Android simulator for example. Click button "Launch Snack".

Step 2: After launch successfully, in the input text field, input the text you want. I input "I am the best". After finish the input, click the bottom square, let the App zoom in, then use your finger to close this App by swiping up (your laptop screen should be touch screen). If you have other way to close this App, that's great.

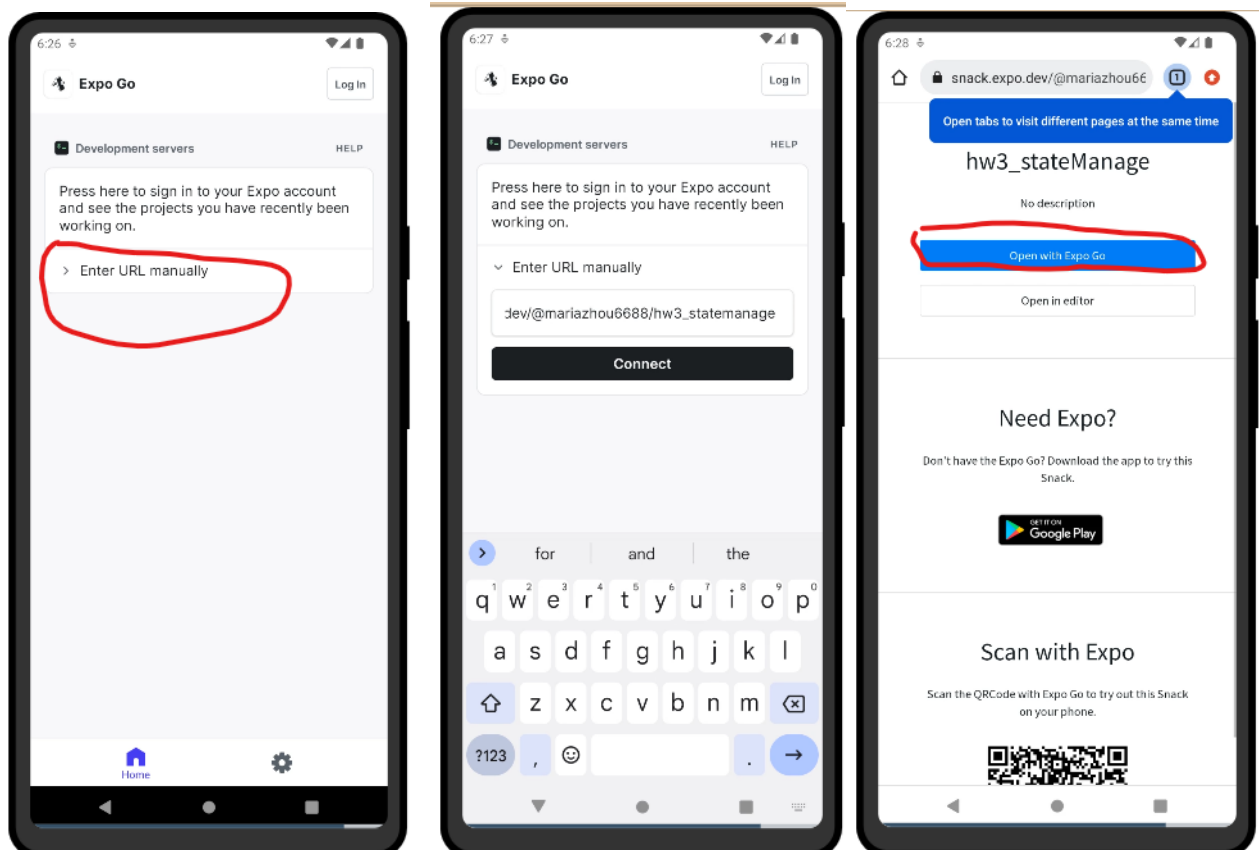

Step 3: Open the search function of simulator, input expo to open the “Expo Go” to reload this App again.

Step 4: In the “Enter URL manually”, input this URL:

https://snack.expo.dev/@mariazhou6688/hw3_statemanage

After that, click button “Connect”. Then click button “Open with Expo Go” .

Step 5: You could find your previous input text is still there.

2) Method 2: If you installed the Expo Go app in your cell phone, you can scan this QR code to do the test.
